

WURLITZER at WOKING LEISURE CENTRE – ATOS LONDON

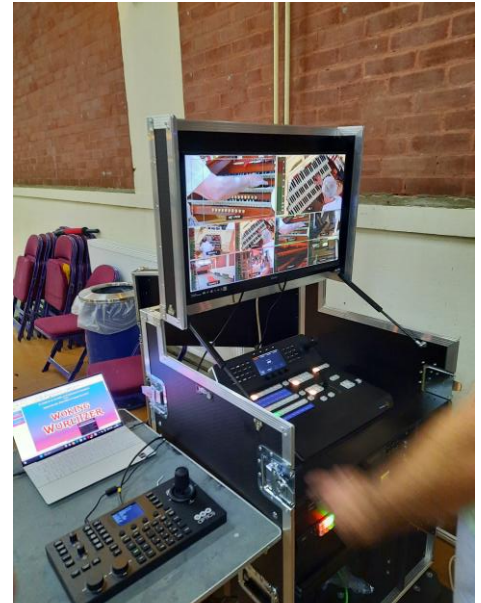

We were contacted by the London branch of the American Theatre Organ Society (ATOS) about their Wurlitzer organ installed in **Woking Leisure Centre** to provide a complete video set up and improved stage lighting. The Wurlitzer shares a space used for gymnastic activities, so all the kit had to be removable as the Wurlitzer is also stored away when not used.

The camera requirement was considerable, Four PTZ Optics PTZ cameras and four Datavideo block cameras all controlled via a Black Magic Design ATEM 2 ME Constellation. Video distribution was done using SDI cables running throughout the venue.

Some of the cameras were installed “behind the scenes” showing operation of several mechanical mechanisms that produced custom sounds. Others were fitted on portable tripod stands on flying leads

View showing some of the cameras fitted on portable tripod stands and the keyboard withdrawn and in the playing position

View from Control position showing the video monitor fitted inside the flight case lid

Other kit supplied included laptop, Blu-ray player, Epson laser projector and screen. New LED lighting fixtures included four Fresnels, eight spotlights and twelve battens, all used to light the front performing space and the Wurlitzer keyboard when it was brought out for performances.

We also put in comprehensive DMX cabling for lighting control. The SDI circuits terminated in the TSPProfessional designed facility BYOB facility panels. Extensive amendments were made to the existing mains supply by our qualified electricians. Control and monitors were housed in a large portable custom-made mobile flight case. Shortly after completion the London and South of England Chapter of ATOS was ended, and The Wurlitzer Heritage Trust (WHT) was created and to organize the concerts.

This Wurlitzer was originally installed in the Granada, Welling in 1937 and after several years in storage it was finally installed at Woking with the first concert in August 1995. We were pleased to be able to help Woking with improvements for their regular well attended concerts

ATR MAGNETICS IN STOCK IN THE UK!

For those of you that know of our company's early history you will remember that we were a major supplier of blank media including open reel tape. Well we still supply open reel tape! You can see the range of American manufactured **ATR Magnetics** open reel tape in our online store.

We are the **only dealer** in the UK to stock ¼", ½", 1" and 2" professional grade tape for those studios and hi-fi enthusiasts that still use this format. We also stock ATR's range of cassette tapes

KING EDWARD HALL – Lindfield, West Sussex

5" touch panel control for day-to-day use with DMX socket for connection of a large lighting control desk

High output LED RGBAL Profile lighting fixtures mounted on one of the two the vertical lighting bars fitted in the main auditorium.

From the touch control panel various colours, and brightness options are available as well as preprogrammed set scenes. To avoid unauthorized use the touch panel is electronically locked with a password

All lighting bars and fixtures were fitted with Neutrik PowerCon mains plugs and DMX lighting control to each of the three bars was done using wireless DMX receivers with the transmitter placed in a lockable cupboard

What does TSPProfessional provide?

- Original company started in 1979 as Tape Shop in Brighton selling audio and video blank media
- That is what TS stands for, and we still sell open reel magnetic tape!
- Our main business is in permanent installations and hire of audio visual and stage lighting
- We offer 24 months warranty on all installations and extended payment terms upon application
- We also sale all types of equipment either directly or via our online store
- We employ five people of which two are qualified electricians
- We do all types of installations for Houses of Worship, Education and Commerce
- We moved from Brighton & Hove in 2004 to a 3000 sqft modern warehouse in Burgess Hill
- All business is obtained from recommendation

LEGENDS BRIGHTON

We were contacted by Legends after they had seen the sign writing on one of our vans driving around and noticed we did stage lighting. Well, their requirement was for lighting up the outside of their building which is situated opposite Brighton seafront.

We supplied and installed several Professional Spectra exterior LED battens outside the front of the building. They are programmed to offer a variety of colours and lighting scenes.

The battens are operated using a British manufactured **Pharos Designer Lighting Playback Controller**. The lighting was put to good use during Brighton Pride 2026.

Other work which was inside the club included a custom-made large LED curtain.

Crowds outside Legends during Pride Brighton 2026

SAYERS COMMON VILLAGE HALL

A major upgrade was required at this busy venue used by multiple groups. A new Epson laser video projector and a 3-metre-wide screen was installed for presentation and Film nights.

Electrovoice EVC series loudspeakers have been installed with an 18" sub-woofer for the cinema sound.

Special mounting brackets were manufactured by us to mount the video screen clear of wall obstructions and for the projector. Due to the size of the venue the sub-woofer had to be mounted on a wall using special brackets made by us. A new DSP four channel amplifier was installed alongside an existing Cloud zone mixer and a Denon media player. A new induction loop amplifier has been installed with the loop foil placed under the new carpet.

*18" sub-woofer fitted using specially
TSPProfessional manufactured steel
wall brackets*

*New amplifier, induction loop
amplifier and Sennheiser UHF Radio
microphone with existing equipment
were fitted into a new 9U x 19" equipment rack*

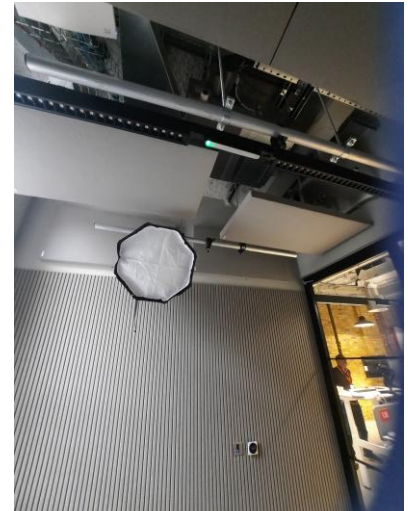

METHODIST CHURCH OF GREAT BRITAIN

*New video background system
alongside acoustic paneling*

The headquarters of the **GB Methodist Church** is situated in Bloomsbury, central London where they have a small video production studio. We were asked to upgrade the sound acoustic treatment using a selection of acoustic panels. These were fitted to side walls and also slung from the ceiling

We also installed two over head aluminium bars used to fit lighting and microphones to avoid using tripod stands as the studio is located in a small space. A new video studio background paper system was also installed.

*Two ceiling bars fitted for attaching
lighting fixtures and microphones*

HIRE OF CLASSIC OPEN REEL TAPE RECORDING DECKS

The **University of Huddersfield** held a media event where they required five open reel tape decks. Amongst our vast collection of sound and stage lighting kit we also have a variety of working open reel tape decks available for hire. These are often requested for archiving of old recordings. Tascam 42, Akai 4000D, Revox B77, Teac 3440 and Uher 562 decks were supplied for a weekend hire. Due to the nature of the equipment, we avoided using third party delivery couriers and delivered and collected them using our own transport. We have also supplied the BBC with some of these decks for use as props including four TEAC 3440 decks for an episode of **Doctor Who**.

AND FINALLY.....

A reminder of our **ONLINE** store where we have listed a selection of products we stock and supply. We have good stocks of replacement loudspeaker drivers from Eminence, and we have recently added B & C drivers offering more selection.

We use these drivers for repairs on customers units including some major work for Bensons Funfair during their busy Summer season around Sussex. Our **ONLINE** store offers as standard **next working day** delivery via Royal Mail or FedEx.
